CHILTERN MT PILOT NP

22nd Jun, 24th Aug, 28th Sep 2019.

Various sections of the park were visited in different seasons this period &, as always, the park has provided a remarkable range of experiences. I have combined the received information & photographs for all 3 outings into the following report.

1. Chiltern Mt Pilot NP - 22nd June 2019

Eight members and a guest gathered at the Chiltern section of the Chiltern Mt Pilot NP on a sunny, windless but chilly winter day.

We went into a section of the Park between Pooley's Track and Ballarat Rd in the optimistic hope of spotting a Regent Honeyeater. The Red Ironbarks (*Eucalyptus sideroxylon*) had patchy blossom and Little Lorikeets, along with 4 species of Honeyeaters, were seen; but no Regents. It was noted that the White (*E. albens*) and Red (*E. polyanthemos* subsp. *vestita*) Boxes were healthy and budding but the

Coral Lichen (N Blair)

Red Stringybark (*E. macrorhyncha*) was still showing signs of stress from the drought. In the understorey the Golden Wattle (*Acacia pycnantha*) and Mountain Grevillea (*Grevillea alpina*) were healthy and budding but the Daphne Heath (*Brachyloma daphnoides*) and Peas (*Dillwynia phyllicoides* and *sericea*) appeared to be struggling. On the ground there were many Greenhood (*Pterostylis*) rosettes among the Coral lichen (*Cladia retipora*) and the fungi were notable - including a patch of Ghost Fungi, Rooting Shanks, Jelly Fungi, *Mycena* sp., and coprophytic fungi. Two Kangaroos were the only wildlife noted.

We moved to Honeyeater Picnic Area for lunch and on the way noted the many ghost fungi and a patch of Striated Greenhoods (*Pterostylis striata*) in full flower with the bark of an Ironbark covered in Gold Dust Lichen (*Chrysothrix candelaris*). At the Picnic Area more fungi were found on and around the dead logs, along with the pupal cases of the Ghost (Rain) Moth and a tiny Mottled Bush Cricket nymph (*Eurepa marginipennis*).

Gold Dust Lichen (N Blair)

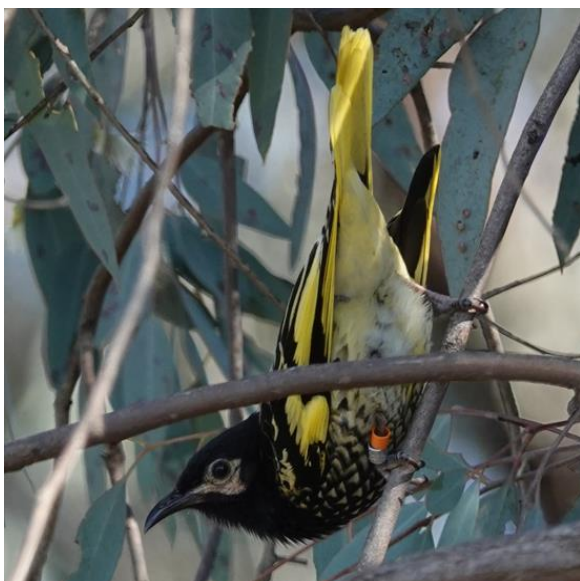

Mottled Bush Cricket nymph (N Blair)

After lunch we moved to Chiltern Valley 2 Dam. A flock of 50 – 100 Pink-eared Ducks dominated the water and a male Chestnut Teal in full breeding plumage was seen. The Welcome Swallows were plentiful and very active and swarms of ‘gnats’ were apparent in the rays of sunlight.

Neil Blair

2. Chiltern/Mt Pilot NP Sat 24th August

The Regents didn't disappoint *this* outing, with many other species (see combined bird list page 6) also sighted on a sunny day moderated by a cool wind. Peter and Phillip captured the following shots.

(P Spencer)

(P Seeley)

Regent Honeyeater

Fan-tailed Cuckoo (P Spencer)

Grey Fantail (P Spencer)

3. Chiltern/Mt Pilot NP Sat 28th Sept

Eleven members participated in the outing on a beautiful sunny, spring day. Unfortunately the Park was very dry and flowering sporadic.

We started in the Pilot section at the junction of Elligates Rd and Baynes Gully Rd. Yellow was the

Golden Moth (P Seely)

predominant colour with 10 or more species identified including Varnish Wattle (*Acacia verniciflua*), Bulbine Lily (*Bulbine bulbosa*), Golden Moths (*Diuris chryseopsis*), Leopard Orchid (*Diuris pardina*), Erect Guinea-flower (*Hibbertia riparia*), Yellow Stars [*Parudia (ex Hypoxis) vaginata*], Yam Daisy (*Microseris walteri*) – Murnong, Grassland Wood-sorrel (*Oxalis perennans*), Thick-fruit Buttercup (*Ranunculus pachycarpus*), Sticky Everlasting (*Xerochrysum viscosum*).

On Link Rd we found the Greenhoods – *Pterostylis nutans* (Nodding), *P. curta* (Blunt), *P. pedunculata* (Maroonhood). A highlight was Bernie noticing a number of species of small birds quite agitated around a high tree hollow. Phillip tapped the base of the tree and out flew a Boobook Owl which perched on a nearby branch and interestingly wasn't harassed by the small birds.

Boobook Owl & spectators (P Spencer)

A nice show of Common Beard-heath (*Leucopogon virgatus*) was found on Ballarat Rd on the way to lunch at Honeyeater Picnic Area, in the Chiltern section of the Park.

Here the highlights were a large number of noisy White-browed Woodswallows and a low, close view of a group of foraging Black-chinned Honeyeaters.

The afternoon was concluded with a walk along Muffler Track with a lovely show of Wax-lip Orchids (*Glossodia major*).

Neil Blair

GALORE HILL

2nd Sep 2019

After being introduced to the Galore Hill Scenic Reserve by Glenda & Bernie, this 500 hectares of open box woodland is now a regularly scheduled outing. The weather was overcast and pleasant, but windy. David led us, first exploring the lower arboretum areas then the summit. After lunch, the more intrepid headed for 'Mad Dog' Morgans's Cave while the rest of us walked the less challenging summit loop. A personal highlight was the excellent view of a Peregrine falcon, calling in flight. On our way out, we headed out via the Grevillea garden which was replanted in 1999 by the Friends of Galore Hill, with many original species in order to assist their preservation. Unsurprisingly, with so much in flower, insects – especially bees – abounded.

Phillip has provided a photographic selection of unidentified Eremophila and Grevillea species, along with other flora sighted on the day. The bird list for the day totaled 30 & was a compilation of Bernie's and Phillip's data.

Blue-burr Daisy (*Calotis cuneifolia*)

Waxlip Orchid (*Glossodia major*)

KENTUCKY FOREST

13th Oct 2019

A reconnoitre earlier in the week revealed a very dry forest. The Bulbine Lilies (*Bulbine bulbosa*) were over and the red bracket fungi on the tree stumps shone out. But by the 13th they had dulled considerably. About 8 members attended and Bernie's sharp eyes soon found a Restless Flycatcher nest, and on nearby trees there was a Willie Wagtail sitting on a nest and also an abandoned White-winged Chough nest. (see photos on cover page).

Later a Golden Whistler kept us interested, calling and flitting through the trees. Plenty of Cape-weed, often sporting a Hoverfly. After lunch we went to Redlands, stopping off to view Swamp Billy Buttons (*Craspedia paludicola*) often with resident Red-spotted Mirid Bugs (*Trilaccus nigroruber*).

Golden Whistler (R Andrews)

Swamp Billy Button & Mirid Bugs

Cheesewood

At Redlands, not quite as dry as Kentucky, we found Sticky Everlasting Daisies (*Ozothamnus thyrsoides*) with visiting bugs (unknown); Chocolate Lilies (*Arthropodium strictum*) were almost over and best find was left to last - Neil found some Weeping Pittosprum (*Pittosporum augustifolium*) to end an interesting day despite the dryness.

Total = 31 species	(...and Antlions)

Antlions

On the Kentucky Forest outing we came across a number of conical pits in loose sand on the roadsides.

These are ubiquitous and I had photos of some taken in Central Australia with an Antlion larva. The sides of the pits being of loose sand enhances the chances of passing insects (usually ants) walking on the steep sides sliding on the loose sand to the bottom of the pit. There hidden under the sand waits the antlion larva who seizes the prey in its large jaws.

Antlion pit & larva, Central Australia (N Blair)

Adult Antlion (P Seely)

The adult antlion belongs to one of the Lacewing families, Myrmeleontidae, with its beautiful 'lace' wings captured locally in a photo by Phillip Seely. It too is a predator.

Neil Blair

BOORHAMAN & WANGARATTA COMMON

26th Oct 2019

Eleven members braved a persistent cold wind interspersed with squalls of rain and hail, to visit 2 sites.

The morning was spent at Boorhaman at a roadside Flora Reserve on the dismantled railway line. This Reserve is well managed by DELWP and has had a lot of work put into it over many years, particularly with regular burns and targeted weed control. Although we were a couple of weeks after its peak floral display there was much still to see and all participants found at least one plant they had not seen before.

Blue/purple was the dominant colour – Small Chocolate-lily (*Arthropodium sp.*); Purple Diuris (*Diuris punctata*); Native Flax (*Linum marginale*); Broughton's Pea (*Swainsona procumbens*); Bluebells (*Wahlenbergia sp.*). Yellow was represented by – Curved Rice-flower (*Pimelea curviflora var. sericea* – a post burn variety); Wattle Mat-rush (*Lomandra filiformis*); Drumsticks (*Pycnosorus globosus*); Scaly Buttons (*Leptorhynchos squamatus*). White by the last of the Milkmaids (*Burchardia umbellata*); Cut-leaf Burr-daisy (*Calotis anthemoides*). Distinctive grasses included – Brush Wire-grass (*Aristida behriana*); Rigid Panic (*Walwhalleya proluta*), Kangaroo Grass (*Themeda triandra*), a variety of Wallaby Grasses (*Rytidosperma sp.*).

Conditions were not conducive to reptile, insect or bird watching, in particular the Brown Songlarks usually seen were absent.

(N Blair)

(P Seely)

(whitest variant too blurry to include)

Small Chocolate Lily and pale forms - ranging from purple, to white-edged, to almost pure white;

Purple Diuris
(P Seely)

Broughton Pea and Seedpods (enlarged)
(N Blair)

Drumsticks

Curved Rice-flower
(N Blair)

Brush Wire-grass

After lunch we visited the Wangaratta Common. The visit was cut short by a hail storm but not before we had time to walk into the Common and look at the spectacular display of flowering Showy Podolepis (*Podolepis jaceoides*) and Scaly Buttons (*Leptorhynchos squamatus*). The massed River Bluebells (*Wahlenbergia fluminalis*) had largely closed their flowers against the elements but there were nice groups of flowering Blushing Bindweed (*Convolvulus erubescens*), Slender Goodenia (*Goodenia gracilis*) and one patch of flowering Woodland Daisies (*Brachyscome paludicola*).

Scaly Buttons
(P Seely)

River Bluebells
(N Blair)

Slender Goodenia
(P Seely)

A massed display of Showy Podolepis (N Blair)

...and up close.

We retreated home a little cold and wet but well satisfied with all that we had seen.

[A very difficult day for photography but so much flora to see – thanks Neil & Phillip - Ed]

WOOMARGAMA NP

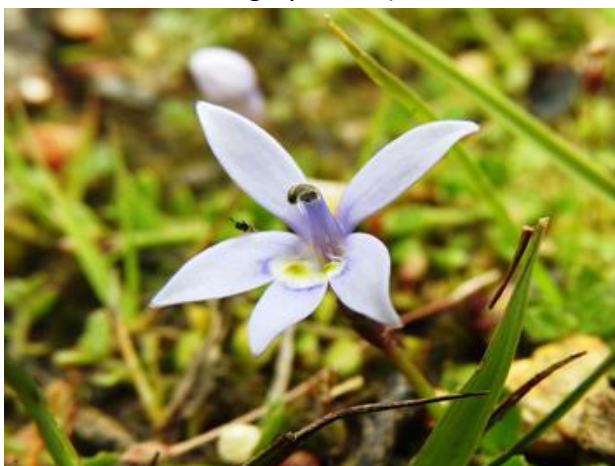

10th Nov, 2019

Six members and a guest participated in this outing in cold, cloudy conditions until mid-afternoon when warmer, sunny conditions prevailed.

In the morning we walked along the Hume and Hovell track between Tunnel Rd and Tin Mines Track, had lunch at Samuel Bollards Campground and spent the afternoon looking west along Hanel's Road.

Common Wedge-pea (P Spencer)

Swamp Isotome (P Seely)

The bush was dominated by Peppermints, both broad-leaved (*Eucalyptus dives*) and narrow-leaved (*E. radiata*); Candlebarks (*E. rubida*); Stringybarks (*E. macrorhyncha*) and Long-leaved Box (*E. goniocalyx*). Yellow was a dominant colour with flowering Common Wedge-pea (*Gompholobium huegelii*), Grey Guinea-flower (*Hibbertia obtusifolia*) and Tiger Orchids (*Diuris sulphurea*). Whites were well represented by Cut-leaf Daisy (*Brachyscome multifida*) and 2 species of Cassinia, Common Cassinia (*C. aculeata*) and Shiny (*C. longifolia*) along with the Small Poranthera (*Poranthera microphylla*). Bluebells (*Wahlenbergia stricta* and *W. gracilentia*) and an unidentified Daisy provided the Blue colour. Parrot peas (*Dillwynia phyllicoides* and *sericea*) added some orange/red.

Birding was difficult due to the cloudy, grey skies and cold conditions although there was a good 'soundscape' led strongly by the Rufous Whistler. Later in the sunny afternoon we were entertained by a singing White-throated Gerygone.

Amongst the myriad of other things going on, Eucalyptus Weevil larvae were munching their way through the leaves, a small unidentified Cicada had climbed a twig stump and was warming in the sun whilst a Bee Fly sunbaked on some bare ground.

Eucalyptus Weevil larvae (N Blair)

unidentified Cicada (P Seely)

Bee Fly (N Blair)

Some handsome (hope they are males?) unidentified moths (P Seely)

Another lovely day in the bush.

STANLEY AREA

23rd Nov, 2019

Twelve members participated on a warm but pleasant, sunny day on which the Cicadas dominated the soundscape.

Our first stop was at the junction of Mt Stanley Rd and Circular Creek Rd in a tall, montane forest of Narrow-leaved Peppermint (*Eucalyptus radiata*), Manna (Ribbon) Gum (*E. viminalis*), Candlebark (*E. rubida*) and Victorian Blue-gum/Eurabbie (*E. globulus* subsp. *bicostata*) with an understory of Common Cassinia (*Cassinia aculeata*), Silver Wattle (*Acacia dealbata*) and Bracken (*Pteridium esculentum*). Colour was provided by the Grey Guinea-flower (*Hibbertia obtusifolia*), Twining Glycine (*Glycine clandestina*), late Ivy-leaved Violets (*Viola hederacea*), flowering Hazel Pomaderris (*Pomaderris aspera*) and a single Common Apple-berry flower (*Billardiera scandens*). A pair of Black-faced Cuckoo-shrikes feeding two nestlings and a pair of Grey Fantails busy nest building were observed. (see cover page)

Common Apple-berry flower (N Blair)

Yellow Robin (P Spencer)

A second stop was made towards the Myrtleford Rd end of Circular Creek Rd. In a clearing dominated by the tussock grass, Red-anther Wallaby-grass (*Rytidosperma pallidum*), there was a lot more flowering with Tiger Orchids (*Diuris sulphurea*), Cinnamon Bells (*Gastrodia sesamoides*) and the early stalks of Rosy Hyacinth-orchids (*Dipodium roseum*) along with Button Everlastings (*Coronidium scorpioides*), Austral Stork's-bill (*Pelargonium australe*), Tall Daisies (*Brachyscome diversifolia*), Weak Daisies (*Brachyscome ptychocarpa*), Creamy Candles (*Stackhousia monogyne*) and Milkmaids (*Burchardia umbellata*). Entertainment was provided by a busy echidna who walked nonchalantly around us.

Austral Stork's-bill

Common Grass Blue, female (R Andrews)

Unidentified Dragonfly (P Spencer)

Black-faced Cuckoo Shrike with young (P Spencer)

Lunch was had at Lake Kerford on which were Grey Teal and Black Ducks, both with young, along with the usual Coots and Cormorants. Mountain Swamp-gums (*Eucalyptus camphora subsp. humeana*) were a new tree in the tall forest and in the understory some colour was provided by flowering Hop Bitter-pea (*Daviesia latifolia*), Mountain Mirbelia (*Mirbelia oxylobioides*) and Mountain Clematis (*Clematis aristata*). A patch of Common Bird-orchids (*Chiloglottis valida*) was noted along with two water ferns, Soft Water-fern (*Blechnum minus*) and Fishbone Water-fern (*Blechnum nudum*). A Black Swamp Wallaby crossed our path and an Australian Hobby was observed eating its prey high in a tree.

Mountain Swamp-gum (N Blair)

Australian Hobby (P Seely)
